Sitness Swipe

Sitness®

Active sitting.
Sustainability
reimagined.

The **Sitness Swipe** is no ordinary stool—it is the modern answer to active, responsible sitting. Clean in design, uncompromising in function, and consistently sustainable.

A key feature is the use of recycled materials from PET bottles. This creates a high-quality, durable material that conserves resources and offers a contemporary take on sustainable design.

The focus is on individual ergonomics: The integrated spindle height adjustment allows for seamless adaptation to any body size—precise, intuitive, and permanently stable.

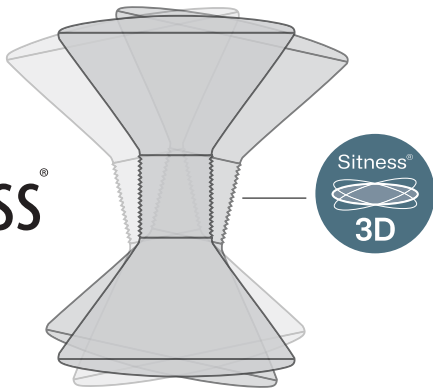

The cylinder head remains the same regardless of the set height. This ensures consistent quality, reliable function, and a constant seating experience.

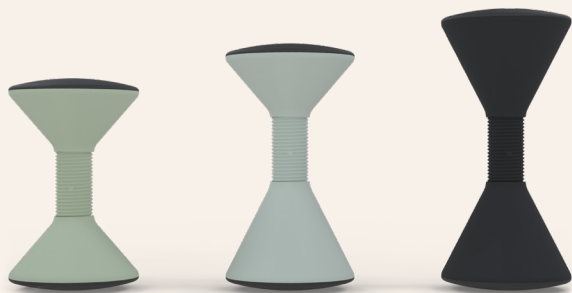

The 360-degree swivel base ensures maximum freedom of movement. It supports dynamic sitting in all directions, keeps the body active, and promotes a natural, healthy posture—ideal for modern work environments.

Flexibility is evident in the details as well: The seat is available in three sizes, allowing it to be optimally adapted to different seating needs.

Sitness Swipe – sophisticated technology, sustainable materials, and uncompromising freedom of movement. For everyone who is rethinking sitting.
